

Project Demo Feedback

Name: Eric Chartier

Community (UN SD goal): RCEsaskatchewan Goal 17

Demo#: 1

Demo Date: Oct 31, 2023

Project Name	RCEsaskAssistance
Blurb	I am helping the RCEsaskatchewan show visitors to the site all of the opportunities going on in saskatchewan. Hopefully this will allow visitors to become members to see the opportunities going on in the province, to turn visitors into members of the community.
Review	
<p>1) The single web-based award application form and data table look really practical to me, but I will send these to others for review. My understanding is that this data would appear in a GoogleDrive related to the rceevent gmail address. This way, you also have the option of giving access to your RCE communications folks, who could find the data and links they need for the web site etc., and you wouldn't have to package it up and email it to us.</p> <p>2) The other data base you share at the end I believe is the basis for the online project repository that would be searchable on our site. It looks really good too. I'd be interested to know how it might appear on the web site, and whether the search function could allow for searching for other words, such as a specific town or organization or project name that someone might be looking for. Could that be possible?</p>	
Feedback	
<ul style="list-style-type: none">- yes the form and subsequent spreadsheet should be owned by the rceevent email, I also hope to provide some documentation on how the spreadsheet functions to take the raw data from the google form so as to understand how the functions refine down the data into a manageable format to be consumed on the website. this documentation.- on the other hand, your second comment on the search function onto other subject matter, has made me look into ways to extend this data collection, to see what changes to the data collection form do to the spreadsheet, this can be useful in giving the community all information on how to change the functionality and form if need be.	
Review	
<p>In terms of permanently stored data, I would hope this would be on our own website and that it would include a copy of what is submitted for the awards event so nothing is lost.</p>	
Feedback	
<ul style="list-style-type: none">- I foresee as a benefit of this way of collecting data in this spreadsheet manner, the first response sheet should be all raw data unadulterated, this sheet could be saved to a csv, a common data format that most spreadsheet programs use. as well having this data in this format has a benefit of having the	

data more accessible to the volunteers, as the way some responses are saved are in pdfs which can't be copied and pasted from which may be useful for volunteers in email award winners

Review

If I understand correctly – this shift makes searching more efficient and stream lines the application form. Which I think will help reduce volunteer time and inspire more to apply. Did I get that correct?

I want to share that when I ask my friend to apply – they often decline and I think this is due to the section on which SDG is met. I often share one or two hours with them to complete the form. I am hoping the shifts that you have suggested might welcome to our new SDGers.

Feedback

This is the goal of this solution, to help make response data more accessible for volunteers, in one case , in the spreadsheet program, data can be streamlined down for example a volunteer could copy all email addresses of people who applied for an award and where approved in one action , this would allow volunteers to send one award acceptance email to alot of people at one time , I hope to demonstrate this in a future demo
